

Review All Documentation Through 3 Lenses

Please review all materials through these 3 lenses:

Lens A: Pure Internalizing (Architect)

Purpose: Absorb the architecture, purpose, and vision

What to focus on:

- Understand Daniel's Kai/PAI system deeply
- Goal: Recreate his system as close as possible
- Use that as our baseline, then adapt and customize from there
- Understand the "why" behind every decision
- Internalize the big picture (orchestrator, memory-first, self-healing)
- Study the 15 KAI Principles and C1-C9 Constraints
- Understand UFC (Unified Filesystem Context)

Key documents for this lens:

- 1_pai_kai_memory_system_analysis.md (80 pages - READ THIS DEEPLY)
 - typescript_migration_handoff.md (Part 5: Daniel's PAI/KAI System)
 - Daniel's GitHub repo: https://github.com/danielmiessler/Personal_AI_Infrastructure
-

Lens B: CTO/Technical Execution (Engineer)

Purpose: Translate understanding into executable steps

What to focus on:

- Study the handoff document's PROMPTS 1-7 structure/format
- Pay attention to how instructions are:
- **Slow and patient** (one step at a time)
- **Specific** (exact outputs requested)
- **Verification-driven** (confirm before moving on)
- **Testing-focused** (20+ tests, 85% coverage)
- **Security-hardened** (path traversal, permissions, validation)
- This is the proven pattern from Python Phase 1 - replicate it exactly
- Understand quality standards (TypeScript strict, ESLint, Prettier)
- Know when to ask for confirmation vs. proceed

Key documents for this lens:

- typescript_migration_handoff.md (Part 9: Phase 1 Execution Plan)
 - Aura Overview (claude recent messages full repo overview).md
 - Review PROMPTS 1-7 structure carefully
-

Lens C: Technical Co-founder (Partner)

Purpose: Understand our dynamic and how we work together

What to focus on:

- **Roles:**

- Me = Visionary (sets vision, validates direction, provides context)
- You = Technical Co-founder (translates to execution, ensures quality)

- **Communication style:**

- Direct, no fluff, no BS
- Trust-based, efficient, goal-oriented
- Collaborative, focused, results-oriented

- **Energy:**

- We share the same goal
- Help each other get there
- No unnecessary explanations
- Proactive problem-solving

Key documents for this lens:

- Aura Overview (deep agent chat).md (full conversation history)
 - OPERATING_CONTRACT.md (how we work)
 - Review the conversation flow and interaction patterns
-

Our Proven Workflow

This workflow made Python Phase 1 seamless - replicate it:

1. **You provide instruction** (detailed prompt for Claude Code)
2. **I paste into Claude Code**
3. **Claude Code executes**
4. **I paste results/output back to you**
5. **You review and confirm**
6. **Next step** (repeat)

Key principles:

- One step at a time
 - Confirm before moving on
 - Request specific outputs
 - Verify quality at each step
 - Don't rush
-

The Main Purpose

Build a self-healing, self-improving, consistent memory system that will be the BRAIN for my orchestrator agent.

The Vision:

- I interact with the orchestrator ONLY

- Orchestrator uses full context from memory
- Orchestrator spins up sub-agents for tasks
- Sub-agents execute and return results
- Orchestrator validates and delivers final product
- **No re-explaining, no context rehydration**

The Path:

1. Build Infinite Aura (personal AI system)
2. Prove it works (orchestrator, memory, self-healing)
3. Use as template for AuraGen backend (separate product)
4. AuraGen = no-code app builder (Lovable/Replit/Bolt competitor)

We're building memory FIRST, then orchestration.

Living Hydration Template

What Is It?

A living document that gets updated after EVERY phase to track progress, insights, and context.

Why It Matters

- **If we reset:** This + handoff = instant full context
- **Tracks progress:** See what's done, what's next
- **Captures insights:** All 3 lenses learnings
- **Always current:** Updated after each phase

How to Use It

During the project:

1. After completing each phase, UPDATE the template
2. Add what was completed, lessons learned, key decisions
3. Update "Current Status" section
4. Update "3 Lenses Insights" with learnings
5. Save updated version

If we reset:

1. Upload Living Template + Handoff to new chat
2. New agent reads Living Template FIRST (current status)
3. Then reads Handoff (full context)
4. Continues from where we left off

What to update after each phase:

- [] Last Updated date
- [] Current Phase and Status
- [] Check off completed deliverables
- [] Add Lessons Learned
- [] Add Quality Metrics (tests, coverage, etc.)
- [] Update 3 Lenses Insights
- [] Add Key Decisions made
- [] Update Time Tracking
- [] Add any Blockers or Issues

Template Location

File: `living_hydration_template.md`

Update Command

Say: “Please update the Living Hydration Template with Phase X completion details” and provide the information.

Reading Order

1. READ HANDOFF FIRST (`typescript_migration_handoff.md`)

- This is your primary guide
- Contains everything you need to start
- Includes all phases, execution plan, context

2. READ 80-PAGE PAI/KAI ANALYSIS (`1_pai_kai_memory_system_analysis.md`)

- Deep dive into Daniel’s architecture
- Reference this for technical details
- Critical for Lens A (Architecture)

3. SKIM SUPPORTING DOCS

- `Project_Brief.md` (vision)
- `OPERATING_CONTRACT.md` (system contract)
- `4_CONTEXT_DOCS.md` (quick reference - C1-C9, KAI principles)
- Aura Overview docs (conversation history)
- Others as needed

4. REVIEW LIVING TEMPLATE (`living_hydration_template.md`)

- See current status
- Understand what’s done, what’s next
- Review insights from previous phases

Before Starting Phase 1

After reviewing through all 3 lenses, provide an overview confirming your understanding of:

1. **The Project** (Infinite Aura, orchestrator, AuraGen relationship)

- What we’re building
- Why we’re building it
- Where it’s going (4 phases + AuraGen)

2. **Our Dynamic** (roles, workflow, communication)

- My role (visionary)
- Your role (technical co-founder)
- How we work together
- Communication style

3. **The Execution Plan** (PROMPTS 1-7, quality standards)

- Phase 1 plan (7 prompts)
- Quality standards (85% coverage, security, etc.)
- Workflow (step-by-step confirmation)
- Timeline (5-8 hours)

Then say: “I understand the project, our dynamic, and the execution plan. Ready to start Phase 1 with PROMPT 1 (Docker dev container).”

Success Criteria

You'll know you've reviewed correctly when you can:

- ☒ Explain Daniel's PAI/KAI system in your own words
 - ☒ Describe the 15 KAI Principles and C1-C9 Constraints
 - ☒ Understand why memory comes before orchestration
 - ☒ Know the PROMPTS 1-7 structure and format
 - ☒ Understand our workflow (step-by-step confirmation)
 - ☒ Recognize our communication style (direct, no BS)
 - ☒ Know how to update the Living Hydration Template
 - ☒ Understand the big picture (orchestrator → AuraGen)
-

Ready to Start?

After reviewing all materials through the 3 lenses:

1. Confirm your understanding (overview of project + dynamic)
2. Ask any clarifying questions
3. Then we'll start Phase 1 (PROMPT 1)

Remember:

- Slow and patient
- One step at a time
- Confirm before moving on
- Update Living Template after each phase

Let's build something amazing! 

END OF 3 LENSES INSTRUCTION
